

**TUBERCULOSIS SCREENING
FOR
PAST REACTIVE TESTING**

If you have had a previously positive PPD skin test for tuberculosis (TB), you are unable to receive the PPD skin test again. A previous positive skin test means that sometime during your life, you have come in contact with the tuberculosis bacteria. It does not mean that you have Active TB Disease.

Name

Social Security Number

Position

Do you have any of the following signs or symptoms of TB lasting longer than 2 weeks?
